My name is Joe Gallo, I provide Cybersecurity and IT Service for small businesses.
I currently manage over 30 networks with approximately 300 computers and assets of a billion dollars.

Almost every day we hear about the latest cyber-attacks. From big business data breaches to the multitude of mom and pop businesses that succumb to a phishing scam, the evidence of a growing number of cyber attackers is prevalent. Any small business that is not considering the state of their IT security should keep the following statistics in mind:
1. Approximately 60 percent of small businesses will be forced to close their doors within six months of a data breach or other form of cyber-attack. 2. Small businesses are targeted 43 percent of the time by cyber attackers.

These statistics are not meant to only scare you, but also to impress upon you the importance of being proactive on securing your business. In today's digital world it is imperative to be informed and have a cybersecurity plan in place at your business and in your personal life.

If you are a small business owner in Massachusetts or Southern New Hampshire looking for a technology service provider that can help improve your office network and computer's reliability, security and performance then iOT can help!

Our clients typically have 1 to 20 computers and rely on their computers, network, and Internet for daily operations. Most of our clients have a specialized line of business application that they use to run their business and rely heavily on that software being operational.

Add our technology experts to your company's team when:

- You want to protect your business from cybersecurity threats.

- You want to focus on your business, not the technology.

- You would like a professional to explain your technical needs to you without geek speak.

- Your current system seems to hinder business more than it helps.

- You need better reliability and security for your computer network.

- You know that computer downtime costs you money.

- You need to be certain your data is always backed up, period.

- You'd like to enable your employees to work remotely.

- You want your employees to do the jobs they were hired for, not waste their time on computer problems.

- You're looking to expand your business, but need to know the technology and costs involved in doing so.

With over 23 years of IT experience I am confident iOT can help your business with all of its technology needs.
 I look forward to meeting with you, listening to your needs and improving your business technology and security.
